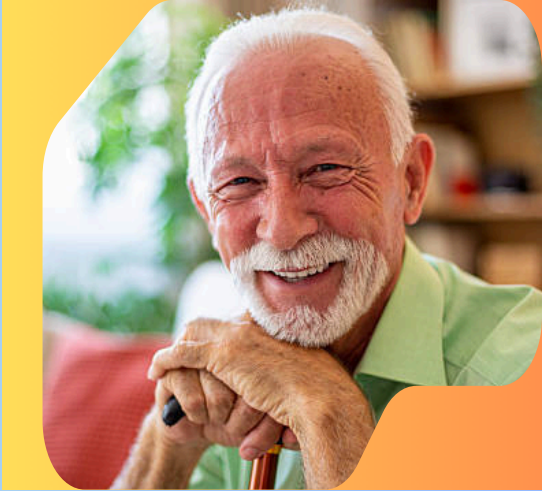
Partnership for Part D Access

Six Protected Classes: The Patients and Costs Behind the Policy

Living with Parkinson's Disease, Robert, Age 80



Robert's Story

Robert has Parkinson's disease psychosis. A medication controls his hallucinations and delusions without worsening mobility, allowing him to remain at home with support from his son and a home health aide. Losing access and switching to an older antipsychotic could **worsen his motor symptoms, cause a serious fall, and accelerate frailty.** He could require institutional care five years early, **increasing family caregiving demands before transitioning to long-term care, depleting family assets, and ultimately shifting costs to Medicaid.**

What are the Six Protected Classes?

Medicare's Six Protected Classes policy requires Medicare Part D plans to cover **all or substantially all** FDA-approved drugs in these categories. This policy exists to ensure that people who rely on these medications are able to access the full range of therapies for their conditions, which are among the most serious and clinically complex.

The Numbers: What Coverage Disruption Would Cost

Table 1. Payer-Borne Costs Associated with Loss of Access to Robert's Parkinson's Disease Psychosis Medication

Category	Inpatient Rehabilitation	Additional Specialist Visits	Home Support	Additional Institutionalized Care	Total Cost to Medicare
Estimated Cost	$19,371	$537	$853	$173,940	$195,039

Table 2.Patient Out-of-Pocket Costs Associated with Loss of Access to Robert's Parkinson's Disease Psychosis Medication

Category	OOP: ED Visits (Incl. Transport)	OOP: IRF	OOP: Additional Specialist Visits	OOP: Home Support	OOP: Additional Institutionalized Care	OOP: Lost Wages	Total OOP Cost
Estimated Cost	$231	$1,736	$107	$170	$300,000	$1,548	$303,792

Bottom Line for Policy Makers

Robert's story shows that sustained access to effective treatment protects his health, independence, and ability to remain at home; a preventable fall and accelerated institutionalization could **cost Medicare nearly $200,000 and impose more than $300,000 in additional costs on Robert and his family**. The Six Protected Classes policy helps Robert and his physicians maintain access to the medication that works, **delaying institutionalization, protecting family assets, and avoiding unnecessary costs across Medicare and Medicaid.**

Disclaimer: This patient persona synthesizes elements from many Parkinson's Disease patient experiences and is not based on any one individual's story. It is intended to demonstrate common experiences and potential impacts across the patient Parkinson's Disease community. Patients with these conditions may also rely on medications within other protected classes to treat comorbidities.
